GATC 3 NOTES

1

- Want to accurately perfect the user input so that I can ~~be represented as a~~ represent ~~with~~ those inputs as a pilot instead of the computer perfectly doing it
- I want to do Quaternions Kinematics
- As I go through the quarter whatever can add accuracy & make realistic, I will apply the concept
- I've already apply the dot product to represent wind ~~to~~ how it affects the aircraft
  - I am soon going to add the cross product once I finish the translational & rotational dynamics

ENGR 202 K-Map of Input Initialization Fault Report
