P = Power-Stats

R = Reset-Line

G = Config-Line

T = test-done

D = data-saved

MCU-test = MT

MCU-save = MS

* I realized I wanted to not rely on 3 tests & would want to base on 5 tests & now would need 3 counters. So rather just do 7 tests, to be more than for accuracy & trust of the sys.

* I had intention of a 2-bit counter when creating the truth table but now adjusting for 3-bit counter
